

Meta Aiken Data Center

The Aiken Data Center will be part of our global infrastructure that brings Meta technologies and programs to life, making the future of human connection possible

\$800M+

Data center investment in South Carolina

~100

Operational jobs supported once completed

1,200+

Skilled trade workers on site at peak construction

We prioritize sustainability

Our goal is to be water positive in 2030, where Meta will restore more water than we consume globally.

Our data centers' electricity use is matched with 100% clean and renewable energy, and our global operations have reached net zero emissions.

Meta will work with local partners to identify and contract new renewable energy projects to support this data center.

Our global fleet of data centers supports Meta technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

Partnering with South Carolina

While building the Aiken Data Center, we will support construction and operational jobs, source from local businesses when possible, and find additional ways to invest directly in the community.

Supporting local schools and nonprofits

We support the community through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, give people the power to build strong, sustainable communities, and improve STEAM education. Our grants program will launch when the Aiken Data Center becomes operational.

Prioritizing sustainability

Meta approaches sustainability from the ground up — from design and construction to operations — by prioritizing energy efficiency and renewable energy, water stewardship, and responsibly managing the end of life of our equipment. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation. In South Carolina, we are working with multiple local partners to meet our 100% clean and renewable energy goal for the Aiken Data Center.

Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize on-site water efficiency. The Aiken Data Center will:

- Use cooling technology that is significantly more water efficient than the industry standard.
- · Be landscaped with native and drought-resistant vegetation.
- · Capture and infiltrate rainwater on site.
- Incorporate water-saving fixtures and technologies within data center facilities.
