

Meta Cheyenne Data Center

The Cheyenne Data Center will be part of our global infrastructure that brings Meta technologies and programs to life, making the future of human connection possible.

\$1.2B

Data center investment in Wyoming

~100

Operational jobs supported once completed

1,000+

Skilled trade workers on site at peak construction

\$480K+

Direct funding to Laramie County schools and nonprofits

20+

Grants and sponsorships provided locally since 2024

Operating Responsibly

Responsible energy and water use

Meta worked with Black Hills Energy to plan for our energy needs and to ensure we are paying the full costs for the energy used by our data center, so consumers are not negatively impacted. Meta has also worked with the City of Cheyenne Board of Public Utilities to pay the full cost of water and wastewater service for our data center. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation.

Water stewardship

Our goal is to be water positive in 2030, where we will restore more water than we consume globally where Meta has owned operations. In Wyoming, Meta has supported three water restoration projects so far, including stream restoration and the installation of gutter bins to curb water pollution in Cheyenne.

Clean and renewable energy

We are committed to supporting the addition of new energy projects to the grid — this includes one project thus far in Wyoming that is adding 365 megawatts of new clean and renewable energy plus 200 megawatts of battery storage. Meta matches all of its electricity use with 100% clean and renewable energy.

Our global fleet of data centers supports Meta technologies that empower more than 3.6 billion people around the world to share ideas, offer support and make a difference.

Partnering with Wyoming

Meta is committed to being a good neighbor and community partner. We do this by working with city and local partners to fund new critical infrastructure, such as roads, energy, water, wastewater and conservation projects, in addition to providing grants annually to support schools and nonprofits.

Jobs to build and operate our data centers

We're committed to supporting local jobs in communities where we have data centers. Each data center building requires hundreds to thousands of skilled trade labor jobs to construct — steel workers, pipefitters, electricians, carpenters, fiber technicians and more. Once operational, each data center supports hundreds of jobs — electricians, HVAC specialists, server and network techs, and engineers — to run some of the world's most advanced data centers.

Supporting local organizations

Meta supports the community through The Future is for Everyone Fund, providing direct funding for local nonprofits that support the community. Additionally, we'll bring our no-cost digital skills training workshops to Cheyenne, helping small businesses and nonprofits grow their reach.

Meta has been proud to invest in the Cheyenne community. We have partnered with Laramie County School District #1 to support their launch of the Laramie County Trades Academy — a new program opening doors for high school students to explore rewarding careers in the skilled trades and empower the next generation of Wyoming workers.

Workforce Development

Meta is investing in the workforce that's building America's digital infrastructure — starting with the communities where we live and work. That commitment includes America's Workforce Academy (AWA), a nationwide, unprecedented fast-track to a long-term career in a skilled trade. Powered by an initial \$115 million first-year investment, AWA is a cost-free program that supports all participants while they learn and then guarantees a job for all graduates. Graduates earn both the industry-recognized National Center for Construction Education and Research (NCCER) credential and an America's Workforce Certificate, both designed to travel with the worker across employers and industry sectors.

Water Stewardship

Our water stewardship program is focused on increasing data center water efficiency, supporting water restoration and conservation projects in watersheds where we have data centers, and being transparent with our water data.

In Wyoming, we are supporting water projects led by local community partners, including:

- Partnering with Laramie County Conservation District to help restore Crow Creek, which serves Laramie County and recharges Wyoming's Ogallala Aquifer.
- Working with the Laramie County Conservation District, the City of Cheyenne, and the Wyoming Game & Fish Department to increase storage capacity of a livestock reservoir that is in disrepair.
- Partnering with Frog Creek Partners to install 180 storm drain inserts to prevent trash and other pollutants from entering Crow Creek.

The Cheyenne Data Center will prioritize on-site water efficiency by:

- Using an efficient closed-loop, liquid cooled system that will use zero operational water.
- Using cooling technology that is significantly more water efficient than the industry standard.
- Landscaping with native and drought-resistant vegetation.
- Capturing and infiltrating rainwater on site.
- Incorporating water-saving fixtures and technologies within data center facilities.

We're proud to support community projects led by:

Boys & Girls Club of Southeast Wyoming

City of Cheyenne – Community Recreation & Events Department

Cheyenne Little Theatre Players

Cheyenne Regional Medical Center Foundation

Circuit Breakers 4-H Robotics

Cowboy Cole Memorial Foundation

Friday Food Bag Foundation

Laramie County Community College

Laramie County School District #1

Trout Unlimited

Wyoming Hunger Initiative
