Meta's Eagle Mountain Data Center

The Eagle Mountain Data Center is part of Meta's global infrastructure that brings our technologies and services to life.

$1.5B+

Data center investment in Utah

2018

Broke ground on the Eagle Mountain Data Center

300+

Operational jobs supported once completed

1,200

Skilled trade workers on site at peak construction

$4.1M+

Direct funding to Utah County schools and nonprofits

210+

Grants and sponsorships provided locally since 2019

We prioritize sustainability

Meta's goal is to be water positive in 2030, where we restore more water than we consume.

Our data centers' electricity use is matched with 100% clean and renewable energy, and our global operations have reached net zero emissions.

Meta-supported projects are adding 1,719 megawatts of new renewable energy in Utah.

Meta's global fleet of data centers supports our technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

Partnering with Utah

We are committed to supporting the community through sourcing labor and materials locally where we can, volunteering, partnering with local chambers, and supporting local schools, nonprofits and community projects.

♡ Supporting local schools and nonprofits

We support the community through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, give people the power to build strong, sustainable communities, and improve STEAM education.

☀ Prioritizing sustainability

Meta approaches sustainability from the ground up — from design and construction to operations — by prioritizing energy efficiency and renewable energy, water stewardship, and responsibly managing the end of life of our equipment. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation. We worked with Rocky Mountain Power to meet our 100% clean and renewable energy goal for the Eagle Mountain Data Center. This includes supporting 13 new renewable energy projects in Utah and helping create an innovative renewable energy program that is available to other customers looking to meet their renewable energy goals.

💧 Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize on-site water efficiency. The Eagle Mountain Data Center:

- Uses cooling technology that is significantly more water efficient than the industry standard.
- Reuses water numerous times before discharging it as wastewater.
- Is landscaped with native vegetation where possible to reduce irrigation demands.
- Captures and infiltrates rainwater on site.
- Uses water-saving fixtures and technologies within data center facilities.

🌱 Water Restoration

Our goal is to restore more water into local watersheds in Utah than we consume by supporting water restoration and conservation projects led by local community partners, including:

- **Central Utah Water Conservancy District**
- **June Sucker Recovery Implementation Program**
- **Springville Irrigation Company**
- **Trout Unlimited**
