

# Meta El Paso Data Center

The El Paso Data Center — our third Meta data center in Texas — will be part of our global infrastructure that brings Meta technologies and programs to life, making the future of human connection possible.

**\$10B+**

Data center investment  
in El Paso, Texas

**300+**

Operational jobs supported  
once completed

**4,000+**

Skilled trade workers on site at  
peak construction

## Operating Responsibly

### Responsible energy and water use

Meta worked with El Paso Electric to plan for our energy needs and to ensure we are paying the full costs for the energy used and infrastructure needed to support our data center so consumers are not negatively impacted. Meta has worked closely with the City of El Paso and El Paso Water to pay the full cost of water and wastewater service for our data center. We are also providing a grant to El Paso Water's AguaCares program to help families in need with water bills.

### Water stewardship

Our goal is to be water positive in 2030, where Meta will restore more water than we consume globally. In El Paso, we will restore 200% of the water consumed by the data center to local watersheds. Initial projects include delivering clean, running water to over 100 homes through our DigDeep partnership and irrigation-efficiency projects for local farmers that will restore millions of gallons of water each year.

### Clean and reliable energy

We are committed to supporting the addition of new energy projects to the grid — this includes projects in Texas that add over 5,000 megawatts of new clean and renewable energy. Meta matches all of its electricity use with 100% clean and renewable energy.

Our global fleet of data centers supports Meta technologies that empower more than 3.5 billion people around the world to share ideas, offer support and make a difference.

# Partnering with Texas

Meta is committed to being a good neighbor and community partner. We do this by working with city and local partners to fund new critical infrastructure, such as roads, energy, water, wastewater infrastructure, and conservation projects, in addition to providing millions in grants annually to support schools and nonprofits.

In El Paso, Meta has invested more than \$8 million in local infrastructure improvements, including road infrastructure. To support local families in need, we will be providing a grant to help fund emergency water utility assistance through El Paso Water's AguaCares Program. We also pay the full costs for the energy used by our data centers — including the costs associated with adding clean and renewable energy to the grid.

## Jobs to build and operate our data centers

We're committed to supporting local jobs in communities where we have data centers. Each data center building requires hundreds to thousands of skilled trade labor jobs to construct — steel workers, pipefitters, electricians, carpenters, fiber technicians and more. Once operational, each data center supports hundreds of jobs — electricians, HVAC specialists, server and network techs and engineers — to run some of the world's most advanced data centers.

## Supporting local schools and nonprofits

We support the community through our annual Data Center Community Action Grants program and other direct funding for projects that put technology to use for community benefit, enable people to build strong, sustainable communities, and improve STEAM education. We will launch our grants program in El Paso in fall 2026. Additionally, we'll bring our no-cost digital skills training workshops to El Paso, helping small businesses and nonprofits grow their reach.

Meta is proud to support a new workforce development effort in partnership with El Paso public schools to help students explore rewarding career pathways — from STEM fields to the skilled trades — through real-world learning experiences. This \$500,000 grant will connect students with career pathways and prepare them for what comes next, whether that's college, technical training, or entering the workforce — reinforcing our commitment to El Paso's long-term vitality.

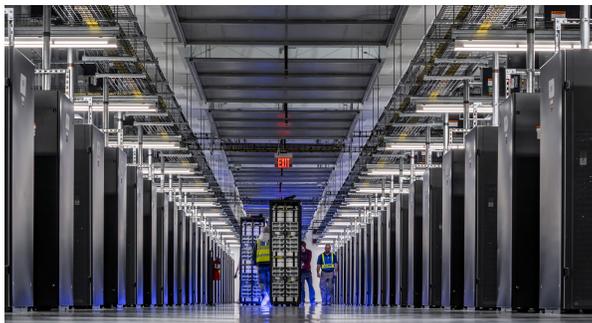

## Protecting and restoring water

Our water stewardship program is focused on increasing data center water efficiency, supporting water restoration and conservation projects in watersheds where we have data centers and being transparent with our water consumption. The El Paso Data Center will prioritize on-site water efficiency by:

- Using an efficient closed-loop, liquid cooled system that will use zero water for a majority of the year.
- Landscaping with native vegetation where possible to reduce irrigation demands.
- Capturing and infiltrating rainwater on site.
- Incorporating water-saving fixtures and technologies within data center facilities.

In collaboration with the Bonneville Environmental Foundation, we are supporting eight water restoration projects across Texas, including these partnerships in El Paso:

- DigDeep: Delivering clean, running water to over 100 homes.
- Local farmers: Irrigation-efficiency technology that minimizes water withdrawal and restores millions of gallons per year.
- Frontera Land Alliance: Supporting local water stewardship solutions.
- Texan by Nature / Texas Water Action Collaborative: Expanding water restoration partners and projects locally.
