Skilled trade workers on site at
peak construction

$5.2M+

Direct funding to Tarrant County
area schools and nonprofits

175+

Grants and sponsorships provided
locally since 2018

We prioritize sustainability

Meta's goal is to be water positive in 2030, where we restore more water than we consume.

Our data centers' electricity use is matched with 100% renewable energy and our global operations have reached net zero emissions.

Meta-supported projects are adding 1,659MW of new renewable energy in Texas.

Meta's global fleet of data centers support our technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

Partnering with Texas

We are committed to supporting the community through sourcing labor and materials locally where we can, volunteering, partnering with local chambers, and supporting local schools, nonprofits and community projects.

Supporting local schools and nonprofits

One way we support the community is through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, give people the power to build strong, sustainable communities, and improve STEAM education.

Prioritizing sustainability

Meta approaches sustainability from the ground up — from design and construction to operations — by prioritizing energy efficiency and renewable energy, water stewardship, and responsibly managing the end of life of our equipment. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation. We worked with multiple partners to meet our 100% renewable energy goals for our operations in Texas, including the Fort Worth Data Center. This includes supporting eight new renewable energy projects in Texas.

Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize onsite water efficiency. The Fort Worth Data Center:

- Uses cooling technology that is significantly more efficient than the industry standard.
- Reuses water numerous times before discharging it as wastewater.
- Is landscaped with native vegetation where possible to reduce irrigation demands.
- Captures and infiltrates rainwater on site.
- Utilizes water saving fixtures and technologies within data center facilities.

Community Spotlight

Since our Fort Worth Data Center went online in 2017, we've supported organizations and projects that meet community needs, including:

- **Fort Worth Independent School District** to build a mobile Virtual Reality STEM Lab for high school students, provide Tynker licenses for elementary schools, recognize exemplary Career & Technical Education teachers and expanding the STEM programming.
- **National Juneteenth Museum** to support the development of a state-of-the-art learning museum representing the global significance of freedom and the celebration of Juneteenth worldwide.
- **Camp Fire First** to support STEAM-focused learning in Pre-K12 out-of-school programs with hands-on activities to explore coding, robotics, engineering, and physical science.
- **Fort Worth Nature Center & Refuge** for the expansion of the Lotus Marsh Boardwalk, an outdoor community space that enables science and environmental education for all ages.
