

Meta Jeffersonville Data Center

The Jeffersonville Data Center — our first in Indiana — will be part of our global infrastructure that brings Meta technologies and programs to life, making the future of human connection possible.

\$800M+

Data center investment in Jeffersonville, Indiana

2024

Broke ground on the Jeffersonville Data Center

~100

Operational jobs supported once completed

1,350

Skilled trade workers on site at peak construction

\$840K+

Direct funding to Clark County-area schools and nonprofits

30+

Grants and sponsorships provided locally since 2024

Operating Responsibly

Responsible energy and water use

Meta worked with Duke Energy to plan for our energy needs and to ensure we are paying the full costs for the energy used by our data center, so consumers are not negatively impacted. Meta has also worked with River Ridge Development Authority (Water) to pay the full cost of water and wastewater service for our data center. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation.

Water stewardship

Our goal is to be water positive in 2030, where we will restore more water than we consume globally where Meta has owned operations.

Clean and renewable energy

We are committed to supporting the addition of new energy projects to the grid — this includes four projects in Indiana that are adding 409 megawatts of new clean and renewable energy. Meta matches all of its electricity use with 100% clean and renewable energy.

Our global fleet of data centers supports Meta technologies that empower more than 3.6 billion people around the world to share ideas, offer support and make a difference.

Partnering with Indiana

Meta is committed to being a good neighbor and community partner. We do this by working with city and local partners to fund new critical infrastructure, such as roads, energy, water, wastewater and conservation projects, in addition to providing grants annually to support schools and nonprofits.

Jobs to build and operate our data centers

We're committed to supporting local jobs in communities where we have data centers. Each data center building requires hundreds to thousands of skilled trade labor jobs to construct — steel workers, pipefitters, electricians, carpenters, fiber technicians and more. Once operational, each data center supports hundreds of jobs — electricians, HVAC specialists, server and network techs, and engineers — to run some of the world's most advanced data centers.

Workforce Development

We are also driving America's Workforce Academy (AWA), a nationwide, cost-free, fast-track program to a long-term career in a skilled trade, powered by an initial \$115 million investment. Graduates earn both the industry-recognized National Center for Construction Education and Research (NCCER) credential and an America's Workforce Certificate, as well as a guaranteed job. We're proud to launch this program in Indiana as one of the 2026 pilot locations.

Meta is proud to support Prosser Career Education Center — the largest stand-alone Career and Technical Education center in Indiana — with a grant supporting the expansion of its facility, which is helping to grow workforce development initiatives and educational programming. Serving students across Southern Indiana, Prosser partners with hundreds of organizations and trade groups to prepare students for local career opportunities through hands-on, work-based learning in more than 25 career and technical programs.

Supporting local organizations

Meta supports the community through The Future is for Everyone Fund, providing direct funding for local nonprofits that support the community. Additionally, we'll bring our no-cost digital skills training workshops to Jeffersonville, helping small businesses and nonprofits grow their reach.

Meta has been proud to invest in the Jeffersonville community. We supported an educational partnership between Maker13 and Youth Link to expand hands-on STEAM education opportunities for students. The grant enhanced programming for more than 3,500 students annually through in-school and after-school programs featuring interactive experiences that include STEAM carts, LEGO® SPIKE™ kits, VEX Robotics and field trips, creating new opportunities for youth to engage in problem-solving, critical thinking and career-focused learning.

Water Stewardship

Our water stewardship program is focused on increasing data center water efficiency, supporting water restoration and conservation projects in watersheds where we have data centers, and being transparent with our water data.

The Jeffersonville Data Center will prioritize on-site water efficiency by:

- Using an efficient closed-loop, liquid cooled system that will use zero operational water.
- Landscaping with native vegetation where possible to reduce irrigation demands.
- Capturing and infiltrating rainwater on site.
- Incorporating water-saving fixtures and technologies within data center facilities.

We're proud to support community projects led by:

Big Brothers Big Sisters of Kentuckiana
