

# Meta's Kansas City Data Center

The Kansas City Data Center will be part of Meta's global infrastructure that brings our technologies and services to life.

**\$800M+**

Data center investment in Missouri

**~100**

Operational jobs supported once completed

**1,200**

Skilled trade workers on site at peak construction

## We prioritize sustainability

Meta's goal is to be water positive in 2030, where we restore more water than we consume.

Our data centers' electricity use is matched with 100% renewable energy and our global operations have reached net zero emissions.

Meta-supported projects are adding 349MW of new renewable energy in Missouri.

Meta's global fleet of data centers support our technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

 Meta

# Partnering with Missouri

We are committed to supporting the community through sourcing labor and materials locally where we can, volunteering, partnering with local chambers, and supporting local schools, nonprofits and community projects.

## Supporting local schools and nonprofits

One way we support the community is through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, give people the power to build strong, sustainable communities, and improve STEAM education. Our grants program will launch at the Kansas City Data Center in fall 2024.

## Prioritizing sustainability

Meta approaches sustainability from the ground up — from design and construction to operations — by prioritizing energy efficiency and renewable energy, water stewardship, and responsibly managing the end of life of our equipment. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation. In Missouri, we are working with multiple local partners, including Evergy, to meet our 100% renewable energy goals for the Kansas City Data Center. This includes supporting two new renewable energy projects in Missouri.

## Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize onsite water efficiency. The Kansas City Data Center will:

- Use cooling technology that is significantly more water efficient than the industry standard.
- Reuse water numerous times before discharging it as wastewater.
- Be landscaped with native vegetation where possible to reduce irrigation demands.
- Capture and infiltrate rainwater on site.
- Incorporate water saving fixtures and technologies within data center facilities.
