Meta Kansas City Data Center

The Kansas City Data Center is part of our global infrastructure that brings Meta technologies and programs to life, making the future of human connection possible.

$1B+

Data center investment in Missouri

2022

Broke ground on the Kansas City Data Center

100+

Operational jobs supported once completed

1,500

Skilled trade workers on site at peak construction

$1M+

Direct funding to Clay County, Platte County, and City of Kansas City, Mo.-area schools and nonprofits

50+

Grants and sponsorships provided locally since 2022

We prioritize sustainability

Meta will be water positive in 2030, where we restore more water than we consume.

Our data centers' electricity use is matched with 100% clean and renewable energy, and our global operations have reached net zero emissions.

New clean and renewable energy projects supported by Meta are adding 599 megawatts in Missouri.

Our global fleet of data centers supports Meta technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

Partnering with Missouri

We are committed to supporting the community through sourcing labor and materials locally where we can, volunteering, partnering with local chambers, and supporting local schools, nonprofits and community projects.

Supporting local schools and nonprofits

We launched our annual Data Center Community Action Grants program in Kansas City in fall 2024 to support projects that are putting technology to use for community benefit, enabling people to build strong, sustainable communities, and improving STEAM education.

Prioritizing sustainability

We approach data center sustainability from the ground up — from design and construction to operations — by prioritizing energy efficiency, clean and renewable energy, water stewardship and responsible management of equipment across our global fleet at end-of-life. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation. In Missouri, we are working with multiple local partners, including Evergy, to meet our 100% clean and renewable energy goal for the Kansas City Data Center. This includes supporting two new renewable energy projects in Missouri.

Minimizing water use

We optimize data center operations globally, driving efficiency and sustainability through design improvements and site-specific solutions. The Kansas City Data Center will prioritize on-site water efficiency by:

- Using cooling technology that is significantly more water efficient than the industry standard.
- Reusing water numerous times before discharging it as wastewater.
- Landscaping with native vegetation where possible to reduce irrigation demands.
- Capturing and infiltrating rainwater on site.
- Incorporating water-saving fixtures and technologies within data center facilities.
