

Meta's Kuna Data Center

The Kuna Data Center will be part of Meta's global infrastructure that brings our technologies and services to life.

\$800M+

Data center investment in Idaho

~100

Operational jobs supported once completed

1,000

Skilled trade workers on site at peak construction

We prioritize sustainability

Meta's goal is to be water positive in 2030, where we restore more water than we consume.

Our data centers' electricity use is matched with 100% renewable energy and our global operations have reached net zero emissions.

A Meta supported project is adding 200MW of new renewable energy in Idaho.

Meta's global fleet of data centers support our technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

Partnering with Idaho

We are committed to supporting the community through sourcing labor and materials locally where we can, volunteering, partnering with local chambers, and supporting local schools, nonprofits and community projects.

Supporting the community

Meta has made a commitment to fund a \$70M+ new water and sewer system for Kuna. The infrastructure will be constructed by Meta contractors and dedicated to the city of Kuna to own and operate. When constructed, this system will be part of the infrastructure backbone to serve the recently annexed eastern side of the city.

We further support the community through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, give people the power to build strong, sustainable communities, and improve STEAM education. Our grants program will launch at the Kuna Data Center in fall 2024.

Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize onsite water efficiency. The Kuna Data Center will:

- Use cooling technology that is significantly more water efficient than the industry standard.
- Be landscaped with native vegetation where possible to reduce irrigation demands.
- Capture and infiltrate rainwater on site.
- Incorporate water saving fixtures and technologies within data center facilities.

Water restoration

Our goal is to restore more water than we consume to local watersheds. We are investing in water conservation and restoration projects, including supporting Trout Unlimited and Boise State University to construct the Alta Harris Creek Side Channel. This project increases flows to Alta Harris Creek and supports fish passage through the Barber Dam, habitat reestablishment and improved water quality.

Prioritizing sustainability

Meta approaches sustainability from the ground up — from design and construction to operations — by prioritizing energy efficiency and renewable energy, water stewardship, and responsibly managing the end of life of our equipment. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation. We are working with Idaho Power to meet our 100% renewable energy goals for the Kuna Data Center. This includes the creation of a new green tariff under the Clean Energy Your Way program that is also available to other large customers looking to support their operations with renewable energy. This includes a new 200MW solar project in Idaho.

We are proud to support projects led by:

- Boise Metro Chamber of Commerce
- Boys & Girls Club of Ada County
- Center for Birds of Prey
- City of Kuna
- Idaho Association of Commerce & Industry
- Idaho Technology Council
- Kuna Chamber of Commerce
- Kuna Food Bank
- Kuna Parks and Recreation
- Kuna School District
- Idaho STEM Ecosystem
- Meridian Chamber of Commerce
- Nampa Chamber of Commerce
