

Meta Tulsa Data Center

The Tulsa Data Center will be part of our global infrastructure that brings Meta technologies and programs to life, making the future of human connection possible.

\$1B+

Data center investment in Oklahoma

~100

Operational jobs supported once completed

1,000+

Skilled trade workers on site at peak construction

Operating Responsibly

Responsible energy and water use

Meta worked with Public Service Company of Oklahoma to plan for our energy needs and to ensure we are paying the full costs for the energy used so consumers are not negatively impacted. Through our utility bills, we will be paying hundreds of millions of dollars to help pay for grid infrastructure, like substations and transmission lines, that benefit all consumers. Meta has also worked closely with Tulsa Metropolitan Utility Authority to pay the full cost of water and wastewater service for our data center.

Water stewardship

Our goal is to be water positive in 2030, where Meta will restore more water than we consume globally. In Oklahoma, we will restore 100% of the water consumed by the data center to local watersheds. Initial projects include a partnership with Phytech that will provide irrigation technology to local farmers that will help them minimize water withdrawal while optimizing yields, saving energy and reducing costs. This 10-year project will implement Phytech's innovative plant-sensor technology across approximately 1,500 acres of vital commodity crops, including corn, soybeans and winter wheat, to save over 50 million gallons of water per year.

Clean and reliable energy

We are committed to supporting the addition of new energy projects to the grid — this includes projects in Oklahoma that are adding 1,500 megawatts of new clean energy. Meta matches all of its electricity use with 100% clean energy.

Our global fleet of data centers supports Meta technologies that empower more than 3.5 billion people around the world to share ideas, offer support and make a difference.

 Meta

Partnering with Oklahoma

Meta is committed to being a good neighbor and community partner. We do this by working with city and local partners to fund new critical infrastructure, such as roads, energy, water, wastewater infrastructure and conservation projects, in addition to providing millions in grants annually to support schools and nonprofits.

In Tulsa, Meta is investing more than \$25 million in local infrastructure improvements, including road and water infrastructure. To support local families in need, we are providing an annual grant to the Public Service Company of Oklahoma's Light a Life program to help customers who are struggling to pay their energy bills. We also pay the full costs for the energy used by our data centers — including the costs associated with adding clean energy to the grid. We are also partnering with the Tulsa Community Foundation to establish a fund that will assist Tulsa residents in paying their water bills and with grants for water service line repair and replacement.

Jobs to build and operate our data centers

We're committed to supporting local jobs in communities where we have data centers. Each data center building requires hundreds to thousands of skilled trade labor jobs to construct — steel workers, pipefitters, electricians, carpenters, fiber technicians and more. Once operational, each data center supports hundreds of jobs — electricians, HVAC specialists, server and network techs and engineers — to run some of the world's most advanced data centers. To strengthen the local talent pipeline, Meta is partnering with Tulsa Tech and Tulsa Community College on a new, cross-institutional workforce development program and learning lab for digital infrastructure careers. We anticipate this partnership will create a pipeline of 200+ graduates annually in technical trades, including cooling simulation, fiber optics and structured cabling, along with AI and data analytics programming.

Supporting local schools and nonprofits

We support the community through our annual Data Center Community Action Grants program and other direct funding for projects that put technology to use for community benefit, enable people to build strong, sustainable communities, and improve STEAM education. We will launch our grants program in Tulsa in fall 2026. Additionally, we'll bring our no-cost digital skills training workshops to Tulsa, helping small businesses and nonprofits grow their reach.

Meta is proud to support Eastside Rise with a grant to expand its neighborhood enhancement program across East Tulsa where our data center is located — supporting projects that range from community gardens and public art to homeowner repairs.

Protecting and restoring water

Our water stewardship program is focused on increasing data center water efficiency, being transparent with our water consumption, and supporting water restoration and conservation projects in watersheds where we have data centers — like our 10-year local water restoration project with Phyttech. The Tulsa Data Center will prioritize on-site water efficiency by:

- Using an efficient closed-loop, liquid-cooled system that will use zero water for a majority of the year.
- Landscaping with native vegetation where possible to reduce irrigation demands.
- Capturing and infiltrating rainwater on site.
- Incorporating water-saving fixtures and technologies within data center facilities.
