# Meta Montgomery Data Center

The Montgomery Data Center — our second in Alabama — will be part of our global infrastructure that brings Meta technologies and programs to life, making the future of human connection possible.

**$1.5B+**

Data center investment in Montgomery, Alabama

**100+**

Operational jobs supported once completed

**1,000+**

Skilled trade workers on site at peak construction

## Operating Responsibly

### Responsible energy and water use

Meta worked with Alabama Power Company to plan for our energy needs and to ensure we are paying the full costs for the energy used by our data center, so consumers are not negatively impacted. Meta has also worked with Montgomery Water Works & Sanitary Sewer Board to pay the full cost of water and wastewater service for our data center. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation.

### Water stewardship

Our goal is to be water positive in 2030, where we will restore more water than we consume globally where Meta has owned operations.

### Clean and renewable energy

We are committed to supporting the addition of new energy projects to the grid. Meta matches all of its electricity use with 100% clean and renewable energy.

Our global fleet of data centers supports Meta technologies that empower more than 3.6 billion people around the world to share ideas, offer support and make a difference.

# Partnering with Alabama

Meta is committed to being a good neighbor and community partner. We do this by working with city and local partners to fund new critical infrastructure, such as roads, energy, water, wastewater and conservation projects, in addition to providing grants annually to support schools and nonprofits.

## Jobs to build and operate our data centers

We're committed to supporting local jobs in communities where we have data centers. Each data center building requires hundreds to thousands of skilled trade labor jobs to construct — steel workers, pipefitters, electricians, carpenters, fiber technicians and more. Once operational, each data center supports hundreds of jobs — electricians, HVAC specialists, server and network techs, and engineers — to run some of the world's most advanced data centers.

## Workforce Development

We are driving America's Workforce Academy (AWA), a nationwide, cost-free, fast-track program to a long-term career in a skilled trade powered by an initial $115 million investment. Graduates earn industry-recognized National Center for Construction Education and Research (NCCER) credentials and an America's Workforce Certificate, as well as a guaranteed job.

## Supporting local organizations

Meta supports the community through The Future is for Everyone Fund, providing direct funding for local nonprofits that support the community. Additionally, we bring our no-cost digital skills training workshops to Montgomery, helping small businesses and nonprofits grow their reach.

Meta has been proud to invest in the Montgomery community. We have partnered with local nonprofits on several initiatives and the Montgomery Public Schools system for their robotics initiative. This program helps bridge the digital literacy gap and offers hands-on learning experiences for K-12 students in our community. Meta has also supported TechMGM's STEM Fest, the Montgomery Chamber, the Alabama Shakespeare Festival and the Alabama National Fair, among others.

## Water Stewardship

Our water stewardship program is focused on increasing data center water efficiency, supporting water restoration and conservation projects in watersheds where we have data centers, and being transparent with our water data. In partnership with Arable, we're investing in a program that helps farmers use less water and save money through better irrigation.

In partnership with Frog Creek Partners, we're supporting a project that uses green infrastructure and natural landscaping to capture and clean city stormwater runoff — reducing flooding, improving water quality and benefiting the community. And with Moonshot Missions, we're developing additional water restoration projects alongside local water and wastewater utilities to benefit the Alabama River Watershed.

The Montgomery Data Center will prioritize on-site water efficiency by:

- Using cooling technology that is significantly more water efficient than the industry standard.
- Incorporating Best Management Practices during construction, including stormwater reuse for construction and dust suppression, as well as utilization of gray water for vehicle washing.
- Landscaping with native vegetation where possible to reduce irrigation demands.
- Incorporating water-saving fixtures and technologies within data center facilities.
