

Meta Richland Parish Data Center

The Richland Parish Data Center will be part of our global infrastructure that brings Meta technologies and programs to life, making the future of human connection possible. This data center will play a vital role in accelerating our AI progress, delivering 5 gigawatts of compute capacity to house Hyperion, our largest multi-gigawatt AI cluster.

peak construction

Operating Responsibly

- Meta has been working closely with Entergy to plan for our energy needs. We pay the full costs for the energy used by our data center, so consumers are not negatively impacted. Through our partnership with Entergy, we're delivering an expected \$2.65 billion in customer savings over the next 20 years.
- We've also contributed \$215 million to Entergy's low- and fixed-income bill assistance and energy-efficiency programs. Through more than \$17 million of investment in water restoration projects in Louisiana, over 1 billion gallons of water per year will be restored to local watersheds. We also pay the full costs of water and wastewater service, and are partnering with the City of Delhi to fund utility upgrades and build a new industrial wastewater treatment plant. In total, we have invested over \$1 billion in local infrastructure improvements. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation.
- We are supporting the addition of new energy to the grid and matching our electricity use with 100% clean and renewable energy.

Our global fleet of data centers supports Meta technologies that empower more than 3.6 billion people around the world to share ideas, offer support and make a difference.

Partnering with Louisiana

Meta is committed to being a good neighbor and community partner. More than \$1.6 billion in contracts have gone to Louisiana businesses since construction began, keeping investment in-state and fueling small business growth. This year, teachers in Richland Parish received annual bonuses of up to \$50,000 — 400% higher than the previous year — thanks to increased tax revenues from Meta's data center project.

Workforce Development

Meta is investing in the workforce that's building America's digital infrastructure — starting with the communities we call home. Louisiana Delta Community College received a \$5 million donation from Meta to create scholarships to train local residents for critical data center jobs. All graduates from Richland Parish's high schools, beginning with the class of 2026, will be eligible for full scholarships for any data center-related trade certificate or course.

We are also driving America's Workforce Academy (AWA), a nationwide, cost-free, fast-track program to a long-term career in a skilled trade, powered by an initial \$115 million investment. Graduates earn both the industry-recognized National Center for Construction Education and Research (NCCER) credential and an America's Workforce Certificate, as well as a guaranteed job.

Water Stewardship

The Richland Parish Data Center will utilize a closed-loop system that circulates a glycol mixture through data halls to efficiently absorb and transfer heat from high-density AI computing hardware. The heat is removed from the closed-loop system that will use zero water for a majority of the year.

As part of our water positive goal, we are supporting six water restoration projects in Louisiana:

- Ballard Bayou Floodplain Inundation
- Bayou Pierre Reforestation and Wetland Treatment Project
- Flyway Forests Wetlands Project
- Red River and Ouachita River Floodplain Restoration Program
- Russell Sage Wildlife Management Area Wetland Restoration Project
- Tensas River National Wildlife Refuge (Stutts Field) Wetland Restoration

Jobs to build and operate our data centers

We're committed to supporting local jobs. Each data center building requires thousands of skilled trade labor jobs to construct — steel workers, pipefitters, electricians, carpenters, fiber technicians and more. Once operational, this data center will support 1,000 operational jobs — electricians, HVAC specialists, server and network techs, and engineers — to run the world's most advanced data center.

Supporting local organizations

Meta supports the community through The Future is for Everyone Fund, providing direct funding for local nonprofits that support the community. We already have provided over \$1 million in community grants in Louisiana, including to local schools to deliver hands-on STEM programs reaching hundreds of students. Additionally, we bring our no-cost digital skills training workshops to Richland Parish, helping small businesses and nonprofits grow their reach.

We've also contributed \$300,000 to the Richland Revitalization Board for improvements to parks, ballfields, and community centers across Rayville, Delhi, Mangham and unincorporated areas of the parish, along with direct investments in Richland Parish Schools, the Northeast Louisiana Veterans Cemetery and the Richland Voluntary Council on Aging.
