

Meta's Rosemount Data Center

The Rosemount Data Center will be part of Meta's global infrastructure that brings our technologies and services to life.

\$800M+

Data center investment
in Minnesota

~100

Operational jobs supported
once completed

1,000

Skilled trade workers on site at
peak construction

We prioritize sustainability

Meta's goal is to be water positive in 2030, where we restore more water than we consume.

Our data centers' electricity use is matched with 100% renewable energy and our global operations have reached net zero emissions.

Meta will work with local partners to identify and contract new renewable energy projects to support this data center.

Meta's global fleet of data centers support our technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

Partnering with Minnesota

While building the Rosemount Data Center, we will source labor and materials locally where we can, and find ways to invest directly in the community.

Supporting local schools and nonprofits

One way we support the community is through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, give people the power to build strong, sustainable communities, and improve STEAM education. Our grants program will launch when the Rosemount Data Center becomes operational.

Prioritizing sustainability

Meta approaches sustainability from the ground up — from design and construction to operations — by prioritizing energy efficiency and renewable energy, water stewardship, and responsibly managing the end of life of our equipment. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation. In Minnesota, we are working with local partners to add new renewable energy to the grid to support the Rosemount Data Center with 100% renewable energy.

Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize onsite water efficiency. The Rosemount Data Center will:

- Use cooling technology that is significantly more water efficient than the industry standard.
- Be landscaped with native vegetation where possible to reduce irrigation demands.
- Capture and infiltrate rainwater on site.
- Incorporate water saving fixtures and technologies within data center facilities.
