Meta's Rosemount Data Center

The Rosemount Data Center will be part of Meta's global infrastructure that brings our technologies and services to life.

$800M+
Data center investment in Minnesota

~100
Operational jobs supported once completed

1,000
Skilled trade workers on site at peak construction

We prioritize sustainability

Meta will be water positive in 2030, where we restore more water than we consume.

Our global operations, including our data centers and offices, are supported by 100% renewable energy and have reached net zero emissions.

Our data centers achieve LEED Gold certification once they are operational.

∞ Meta

Partnering with Minnesota

We are committed to supporting the community through hiring people to build and operate our data center, volunteering and supporting local schools, nonprofits and community projects.

Supporting local schools and nonprofits

One way we support the community is through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, connect people online or off and improve STEM education. Our grants program will launch when the Rosemount Data Center becomes operational.

## Supporting our data center with 100% renewable energy

Meta will work with local partners to add new renewable energy to the grid to support the Rosemount Data Center with 100% renewable energy.

Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize onsite water efficiency. The Rosemount Data Center will:

- Use cooling technology that is significantly more water efficient than the industry standard.
- Be landscaped with native and drought resistant vegetation.
- Capture and infiltrate rainwater on site.
- Incorporate water saving fixtures and technologies within data center facilities.
