

Meta Singapore Data Centre

The Singapore Data Centre will be part of our global infrastructure that brings Meta technologies and programmes to life, making the future of human connection possible.

S\$1.4B+

Data centre investment in Singapore

100+

Operational jobs supported once completed

3,000

Skilled trade workers on site at peak construction

S\$3.8M+

Direct funding to not-for-profits and community initiatives in Singapore

50+

Grants and sponsorships provided locally since 2019

Operating Responsibly

- Our goal is to be water positive in 2030, where we will restore more water than we consume globally where Meta has owned operations.
- We are committed to supporting the addition of new energy projects to the grid — this includes four projects in Singapore that are adding more than 250 megawatts of new clean and renewable energy. Meta matches all of its electricity use with 100% clean and renewable energy.
- Our data centre buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation.

Our global fleet of data centres supports Meta technologies that empower more than 3.6 billion people around the world to share ideas, offer support and make a difference.

Partnering with Singapore

Meta is committed to being a good neighbour and community partner. We do this by supporting jobs and sourcing labour and materials locally where we can, taking part in community and water restoration projects, and partnering with local chambers, small businesses and not-for-profit organisations.

Supporting local organisations

Meta supports the community through our annual Data Centre Community Action Grants programme providing direct funding for local nonprofits that support the community. Additionally, we bring our no-cost digital skills training workshops to Singapore, helping small businesses and nonprofits grow their reach. The Singapore Data Centre won the 2024 Mentoring SG Corporate Excellence Award in recognition of our outstanding dedication to mentoring and exceptional contributions to youth development and the broader community in Singapore.

Community Spotlight: Digital skills for not-for-profits

Over the last two years, Meta has partnered with the National Volunteer and Philanthropy Centre (NVPC) to offer digital skills training to help more than 300 nonprofits engage in meaningful conversations with donors for their causes. For example, the nonprofits learnt how to establish measurable goals and foster meaningful interactions by leveraging the power of Meta tools to maximise their reach and learn how to craft engaging content on Facebook and Instagram.

Operating Responsibly

We approach data centre sustainability from the ground up — from design and construction to operations — by prioritising energy efficiency, clean and renewable energy, water stewardship and responsible management of equipment across our global fleet at end-of-life. Our operational data centre buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation once operational.

Net zero emissions goals

Our goal is to reach net zero emissions across our global value chain in 2030. Our data centres' electricity use is matched with 100% clean and renewable energy through our strategy of adding renewables to the local grid, which also helps decarbonise the electricity system. This includes adding 1 megawatt of solar energy on the roof of the Singapore Data Centre, a first for Meta custom-built data centres.
