Meta Stanton Springs Data Center

The Stanton Springs Data Center is part of the global infrastructure that brings Meta Technologies and programs to life, making the future of human connection possible.

$1.5B+

Data center investment in Georgia

2018

Broke ground on the Stanton Springs Data Center

400+

Operational jobs supported once completed

1,300

Skilled trade workers on site at peak construction

$4.5M+

Direct funding to schools and nonprofits in the Stanton Springs area

100+

Grants and sponsorships provided locally since 2019

We prioritize sustainability

Our goal is to be water positive in 2030, where Meta will restore more water than we consume globally.

Our data centers' electricity use is matched with 100% clean and renewable energy, and our global operations have reached net zero emissions.

Projects supported by Meta are adding 1,120 megawatts of new clean and renewable energy in Georgia.

Our global fleet of data centers supports our technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

Partnering with Georgia

We are committed to supporting the community through sourcing labor and materials locally where we can, volunteering, partnering with local chambers, and supporting local schools, nonprofits and community projects.

Supporting local schools and nonprofits

Meta is committed to driving innovation, creating opportunities, and advancing excellence in education for all the communities we support. One of the ways we support the community is through our annual Data Center Community Action Grants program and other direct funding for projects that put technology to use for community benefit, enable people to build strong, sustainable communities, and improve STEAM education.

In 2025, we have partnered with Newton College and Career Academy to provide access to competitive robotics programs for every school (K-12) from Newton County Schools while promoting STEM education and careers for students and their families. With the support of Meta, Newton County robotics teams have achieved state, national, and world competition success, serving as a model robotics program in Georgia.
Prioritizing sustainability

We approach data center sustainability from the ground up — from design and construction to operations — by prioritizing energy efficiency, clean and renewable energy, water stewardship and responsible management of equipment across our global fleet at end-of-life. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation. In Georgia, we worked with Walton Electric Membership Corporation and other partners, including Silicon Ranch, to meet our goal of matching the Stanton Springs Data Center's electricity use with 100% clean and renewable energy. This includes supporting 11 new solar energy projects in Georgia and creating an innovative framework that is available to other large customers looking to support their operations with renewable energy.

Minimizing water use

We optimize data center operations globally, driving efficiency and sustainability through design improvements and site-specific solutions. The Stanton Springs Data Center prioritizes on-site water efficiency by:

- Using cooling technology that is significantly more water efficient than the industry standard.
- Reusing water numerous times before discharging it as wastewater.
- Landscaping with native vegetation where possible to reduce irrigation demands.
- Capturing and infiltrating rainwater on site.
- Incorporating water-saving fixtures and technologies within data center facilities.
