We prioritize sustainability

Meta will be water positive by 2030, where we restore more water than we consume.

Meta has added 1,120 MW of new renewable energy in Georgia.

Our global operations, including our data centers and offices, are supported by 100% renewable energy and have reached net zero emissions.

Meta’s Stanton Springs Data Center

The Stanton Springs Data Center is part of Meta’s global infrastructure that brings our technologies and services to life, along with future immersive experiences like the metaverse — the next chapter of the internet.

Partnering with Georgia

We are committed to supporting the community through hiring people to build and operate our data center, volunteering and supporting local schools, nonprofits, and community projects.

Supporting local schools and nonprofits

One way we support the community is through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, connect people online or off and improve STEM education.

New renewable energy investments

Meta worked with Walton Electric Membership Corporation and other partners, including Silicon Ranch, to meet our 100% renewable energy goals for the Stanton Springs Data Center. This includes supporting 10 new renewable energy projects in Georgia and creating an innovative renewable framework that is available to other large customers looking to support their operations with renewable energy.

Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize onsite water efficiency. The Stanton Springs Data Center:

- Uses cooling technology that is significantly more efficient than the industry standard.
- Reuses water numerous times before discharging it as wastewater.
- Is landscaped with native vegetation where possible to reduce irrigation demands.
- Captures onsite stormwater and reusing for dust suppression.
- Captures and infiltrate rainwater on site.
- Incorporate water saving fixtures and technologies within the data center facilities.
