Meta’s Temple Data Center

The Temple Data Center will be part of Meta’s global infrastructure that brings our technologies and services to life, along with future immersive experiences like the metaverse — the next chapter of the internet.

$800M+

Data center investment in Temple

~100

Operational jobs supported once completed

1,000

Skilled trade workers on site at peak construction

We prioritize sustainability

Meta will be water positive by 2030, where we restore more water than we consume.

Meta is adding 1,224MW of new renewable energy in Texas.

Our global operations, including our data centers and offices, are supported by 100% renewable energy and have reached net zero emissions.

Meta’s global fleet of data centers support our technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference.

Partnering with Texas

We are committed to supporting the community through hiring people to build and operate our data center, volunteering and supporting local schools, nonprofits and community projects.

Supporting local schools and nonprofits

One way we support the community is through our annual Data Center Community Action Grants program and other direct funding for projects that put the power of technology to use for community benefit, connect people online or off and improve STEM education. Our grants program will begin when the Temple Data Center becomes operational.

New renewable energy investments

Meta is working with multiple partners to meet our 100% renewable energy goals for the Temple Data Center. This will include supporting new renewable energy projects in Texas.

Minimizing water use

We are proud to build some of the most sustainable data centers in the world and prioritize onsite water efficiency. The Temple Data Center will:

- Use cooling technology that is significantly more efficient than the industry standard.
- Reuse water numerous times before discharging it as wastewater.
- Be landscaped with native and drought resistant vegetation.
- Use water efficient construction management practices, including early pavement and waterless dust control measures.
- Capture and infiltrate rainwater on site.
- Incorporate water saving fixtures and technologies within data center facilities.

We’re proud to support projects led by:

- Temple Chamber of Commerce
- Temple Economic Development Corporation
- Temple Independent School District
