### Meta’s data centers in the United States

Our data centers are part of Meta’s global infrastructure that brings our technologies and services to life, along with future immersive experiences like the metaverse — the next chapter of the internet.

#### Combined impact of our 17 data centers in the United States

<table>
<thead>
<tr>

<td>Meta’s operations are supported by 100% renewable energy and have achieved net zero emissions</td>
<td>Of renewable energy from 86 Meta-supported wind and solar projects being added to local grids across 24 states</td>
<td>Water restoration and conservation projects supported in the U.S. that put billions of gallons of water back into local watersheds as part of our goal to be water positive by 2030</td>
</tr>
</tbody>
</table>

#### In the community

Meta supports projects led by nonprofits and schools in communities where we have data centers that address critical community needs by:

- Putting the power of technology to use for community benefit.
- Connecting people online or off, or improving local science.
- Promoting science, technology, engineering and mathematics (STEM) education.

This giving translates into new technology equipment and programming ranging from robotics camps and STEM labs to adult digital skills led by community partners including Junior Achievement, Boys & Girls Clubs and local schools.

Meta's global fleet of data centers supports our technologies that empower more than 3 billion people around the world to share ideas, offer support and make a difference every day. More than 200 million companies, mainly small businesses, use our technologies to reach customers each month.

Supporting the metaverse

Meta is advancing AI for a more connected world and pushing the boundaries of technology through research, product innovation and infrastructure — with our data centers supporting the next generation of AI systems.

Operating our data centers

Here’s some of what you’ll find inside our data centers:

- Tens of thousands of servers and over 500,000 individual fiber connections in each building. We put in multiple paths of high-capacity fiber to ensure reliability and to connect our data centers to Meta’s global infrastructure.
- Open Computer servers, which stay naturally cooler by allowing air to flow more freely through them.
- Hot aisles that contain the hot air generated from our servers, which is then either recirculated or efficiently removed from the data center.

Prioritizing sustainability

For more than a decade, Meta has been building and operating efficient and sustainable data centers. Some of the ways we put sustainability into action include:

- Our water stewardship program, which focuses on minimizing water use, restoring water to local watersheds, and being transparent with our water data.
- Supporting our operations with 100% renewable energy by adding new wind and solar projects to the same grids as our data centers and offices.
- Sourcing more sustainable building materials, including piloting low carbon concrete projects and using 17 million square feet of Forest Stewardship Council-certified new wood products.
- Incorporating sustainable design and construction strategies, which helped our operational data center buildings earn LEED Gold certification.

Jobs to build and operate our data centers

Each data center building can fit a modern aircraft carrier and take 12 to 18 months to construct, which requires hundreds of skilled trade labor jobs. This includes construction managers, health and safety specialists, carpenters and many others.

Once operational, each data center supports hundreds of jobs like electrical specialists, network engineers, server technicians, security and many more. These jobs are critical to keeping our data centers running 24 hours a day, 365 days a year.

Learn more about our 17 data centers in the United States:

- Alabama - Huntsville Data Center
- Arizona - Mesa Data Center
- Georgia - Stanton Springs Data Center
- Idaho - Kuna Data Center
- Illinois - DeKalb Data Center
- Iowa - Altoona Data Center
- Missouri - Kansas City Data Center
- Nebraska - Sarpy Data Center
- New Mexico - Los Lunas Data Center
- North Carolina - Forest City Data Center
- Ohio - New Albany Data Center
- Oregon - Prineville Data Center
- Tennessee - Gallatin Data Center
- Texas - Fort Worth Data Center
- Texas - Temple Data Center
- Utah - Eagle Mountain Data Center
- Virginia - Henrico Data Center
