

Meta Lebanon Data Center

The Lebanon Data Center — our second in Indiana — will be part of our global infrastructure that brings Meta technologies and programs to life, making the future of human connection possible.

\$10B+

Data center investment in Lebanon, Indiana

300

Operational jobs supported once completed

4,000+

Skilled trade workers on site at peak construction

Operating Responsibly

Responsible energy and water use

Meta worked with Wabash Valley Power Alliance and Boone Power to plan for our energy needs and to ensure we are paying the full costs for the energy used by our data center, so consumers are not negatively impacted. Meta has also worked with the City of Lebanon to pay the full cost of water and wastewater service for our data center. Our operational data center buildings achieve LEED® Gold certification by focusing on efficiency, sustainability and innovation.

Water stewardship

Our goal is to be water positive in 2030, where we will restore more water than we consume globally where Meta has owned operations. An initial irrigation-efficiency project for local farmers will restore millions of gallons of water to the Upper Wabash River Basin annually for the next 10 years.

Clean and renewable energy

We are committed to supporting the addition of new energy projects to the grid — this includes four projects in Indiana that add 409 megawatts of new clean and renewable energy. Meta matches all of its electricity use with 100% clean and renewable energy.

Our global fleet of data centers supports Meta technologies that empower more than 3.6 billion people around the world to share ideas, offer support and make a difference.

Partnering with Indiana

Meta is committed to being a good neighbor and community partner. We do this by working with city and local partners to fund new critical infrastructure, such as roads, energy, water, wastewater and conservation projects, in addition to providing grants annually to support schools and nonprofits.

In Lebanon, Meta is investing more than \$75 million in public water and wastewater infrastructure projects, and approximately \$45 million in public road improvements and restoring the ecological health of the nearby Deer Creek riparian corridor. We will also donate \$1 million per year, over the next 20 years, to the Boone County Community Trust to provide direct energy cost assistance to families in need. We partnered with The Caring Center to provide dedicated utility assistance to eligible residents — delivering emergency water bill support to approximately 500 families.

Jobs to build and operate our data centers

We're committed to supporting local jobs in communities where we have data centers. Each data center building requires hundreds to thousands of skilled trade labor jobs to construct — steel workers, pipefitters, electricians, carpenters, fiber technicians and more. Once operational, each data center supports hundreds of jobs — electricians, HVAC specialists, server and network techs, and engineers — to run some of the world's most advanced data centers.

Workforce Development

We are also driving America's Workforce Academy (AWA), a nationwide, cost-free, fast-track program to a long-term career in a skilled trade, powered by an initial \$115 million investment. Graduates earn both the industry-recognized National Center for Construction Education and Research (NCCER) credential and an America's Workforce Certificate, as well as a guaranteed job. We're proud to launch this program in Indiana as one of the 2026 pilot locations. Thank you to Boone County Economic Development Corporation and the Region 5 Workforce Development Board for helping us roll out this program locally.

Meta is proud to support a new workforce development initiative — the Boone County Career Collaborative — in partnership with the county school systems, Boone County Chamber of Commerce and Boone County Economic Development Corporation. This program will help students explore career opportunities, gain work-based learning experiences and connect with local employers. Meta is helping to build a future-ready workforce, demonstrating a commitment to Lebanon's long-term vitality.

Supporting local organizations

Meta supports the community through The Future is for Everyone Fund, providing direct funding for local nonprofits that support the community. We will launch our grants program in Lebanon in fall 2026. Additionally, we'll bring our no-cost digital skills training workshops to Lebanon, helping small businesses and nonprofits grow their reach.

Water Stewardship

Our water stewardship program is focused on increasing data center water efficiency, supporting water restoration and conservation projects in watersheds where we have data centers, and being transparent with our water data.

The Lebanon Data Center will prioritize on-site water efficiency by:

- Using an efficient closed-loop, liquid cooled system that will use zero water for the majority of the year.
- Landscaping with native vegetation to reduce irrigation demands.
- Capturing and infiltrating rainwater on site.
- Incorporating water-saving fixtures and technologies within data center facilities.

We're proud to support community projects led by:
